How to Prepare for and Apply to Medical School
Looking for information about individual medical schools?

When you’re ready to start exploring medical schools, subscribe to Medical School Admission Requirements™ (MSAR®), a website with comprehensive profiles of each MD-granting U.S. and Canadian medical school.

MSAR is a trusted source of information about medical schools, updated with data from the MCAT® exam, the AMCAS® application, and medical school admissions offices. A subscription enables you to search, sort, rank, and compare individual U.S. and Canadian medical schools. Profiles are updated throughout the year by medical school staff to ensure information is complete and current.

Considered the gold standard, MSAR provides information not found anywhere else.

For more information, visit aamc.org/msarinfo.

About the AAMC

The AAMC is a not-for-profit association dedicated to transforming health care through medical education, patient care, medical research, and community collaborations. Its members are all 155 accredited U.S. and 17 accredited Canadian medical schools; more than 400 teaching hospitals and health systems, including Department of Veterans Affairs medical centers; and more than 70 academic societies. Through these institutions and organizations, the AAMC serves the leaders of America's medical schools and teaching hospitals and their more than 179,000 full-time faculty members, 92,000 medical students, 140,000 resident physicians, and 60,000 graduate students and postdoctoral researchers in the biomedical sciences. Additional information about the AAMC is available at aamc.org.

Important Notice

The information in this book is based on the most recent data provided by AAMC-member medical schools at the request of the AAMC.

We edited and, in some instances, condensed the material to meet space limitations. In compiling this edition, we made every reasonable effort to ensure the accuracy and timeliness of the information, and, except where noted, the information was updated as of summer 2020. All the information, however, especially figures on tuition and expenses, is subject to change and is nonbinding for the medical schools listed and the AAMC. All medical schools listed in this edition, as with other educational institutions, are subject to federal and state laws prohibiting discrimination on the basis of race, color, religion, sex, age, disability, or national origin.

Such laws include Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, the Americans with Disabilities Act, and the Age Discrimination Act of 1975, as amended. For the most current and complete information about costs, official policies, procedures, and other matters, please contact individual schools.

In applying to U.S. or Canadian medical schools, applicants need not go through any commercial agencies. The AAMC does not endorse any organization or entity that purports to help applicants gain admission to medical school, other than undergraduate premedical advisors and medical school admissions officers.

AAMC Commitment to Diversity and Inclusion

The AAMC’s mission is to serve and lead the academic medicine community to improve the health of all. As the U.S. population ages and grows more diverse while disparities in health care persist, understanding the benefits of diversity and inclusion becomes critical to addressing the health of the nation. The AAMC’s commitment to diversity and inclusion in medicine and biomedical research spans more than three decades, demonstrated by ongoing leadership and engagement in activities — starting as early as high school — that promote diversity and inclusion through programs, advocacy, and research. Information about AAMC initiatives is available at aamc.org/diversity.

Worksheets at the ends of chapters in this guide are available in fillable PDF format at aamc.org/msar-resources.
How to Use This Guide

The AAMC works through many avenues to support medical education and help aspiring physicians succeed in their path to medical school. We created this guide to serve as a resource for students considering a career as a physician. Each chapter explains one aspect of the medical school admission process, and each is carefully reviewed every year by content experts at the AAMC.

You may choose to read this book cover to cover, or you may prefer to skip ahead to chapters most relevant to where you are in the application process. Here are some tips to get the most out of this guide.

**Skim the table of contents before you begin reading.**
Not everyone takes the same path or is in the same place when they use this guide. You may want to read the chapters in the order that most relates to where you are in the process and what you need to know to move forward.

**Use and update the chapter worksheets.**
At the end of each chapter, you’ll find a worksheet that can help you with your medical school application. Topics include tracking your volunteer experiences, finding people to write your letters of evaluation, and determining the right time to take the MCAT® exam. You may want to complete these worksheets after you read the chapter or hold onto them until you’re at that phase of the application process. You can print copies of the worksheets or complete fillable PDFs (aamc.org/msar-resources).

We encourage you to share your work with your prehealth advisor as you complete the worksheets. You should have an advisor or mentor to help guide you through this process. Find out more about the benefits of working with an advisor in Chapter 2, “Academic Preparation.” If you do not have a prehealth advisor at your school, you can find one at NAAHP.org.

**Look through the data in this book to understand the national picture.**
Part of being a well-prepared applicant is knowing more about the national applicant and acceptance data. While every applicant is different, and every medical school accepts applicants with a range of scores and experiences, it can be helpful to see how you compare with other applicants across the country. This will help you to decide, along with your prehealth advisor, when you’re ready to apply to medical school. The data in this book come directly from the AAMC Data Warehouse, the AAMC Data Book, the American Medical College Application Service® (AMCAS®), the MCAT, and surveys conducted with entering and graduating medical students such as the Graduation Questionnaire (GQ) and the Matriculating Student Questionnaire (MSQ). The data are comprehensively updated each year with the most current information available at the time of production. Because this information comes directly from the source, you can trust that it is the most up-to-date and accurate information available. For more and current information, you can check the AAMC FACTS tables available at aamc.org/facts.

**Check out the Medical School Admission Requirements™ (MSAR®) site when you’re ready to look at individual schools.**
One of the most important decisions you’ll make is where to apply to medical school. The AAMC’s Medical School Admission Requirements™ (MSAR®) website provides the most comprehensive, up-to-date information and data. When you’re ready to start researching medical schools, tap into this powerful online database of information on U.S. and Canadian medical schools and baccalaureate-MD programs at aamc.org/msar. As the gold standard for admission requirement information, this is the only comprehensive resource of accurate and current data directly from the MCAT program, the AMCAS program, and medical school admissions offices. Your one-year subscription allows you to search, sort, and save information.
The AAMC has resources to help you, from inspiration through practice.
We have numerous resources to help you, whether you’re just considering a career as a physician or you’re already applying to medical school. Take a look at these premed and applicant resources, and tell other applicants about them if you find them useful.

A note about MD versus DO programs: This guidebook explains the process of preparing for and applying to medical doctor (MD) programs accredited by the Liaison Committee on Medical Education (LCME®). You may have heard of osteopathic medicine programs that grant doctor of osteopathic medicine (DO) degrees.

DO and MD programs have many similarities; both types of physicians are fully certified to practice medicine in the United States after passing board examinations. For more information about DO-granting schools and admission requirements, consult the American Association of Colleges of Osteopathic Medicine.
“First, I want to congratulate you on your decision to explore medical school and a career in medicine. This is the first step into a remarkable and wonderful field.

When I decided medicine was my path, I talked to my mother, who is a nurse. She shared how challenging life as a doctor is — the difficult training, the long hours, the high expectations. She emphasized that being a doctor is not as glamorous as television makes it seem. I am grateful for her insight because it forced me to evaluate the reasons behind my decision. I looked at my shadowing and volunteering experiences differently and discovered a love of medicine and patient care that drove me to work even harder to achieve my goal of becoming a doctor. These experiences helped me to realize there is nothing else that I could imagine myself doing even with the tremendous effort required and the consistent difficulties along the path.

Now in my third year of medical school, I can say this love of interacting with patients and using my passion for science and medicine to improve lives is what has kept me going through the challenges. It is what gets me through a long day in the hospital or the stress of studying for an exam, and it is the same motivation that energized me when I was in your position applying to medical school.

I encourage you to dig deep and find your core motivation. Let this motivation guide your application, and it will be what carries you through the challenges ahead. This guidebook will help you through the nitty-gritty of the application process, but never lose sight of the reason why being a doctor is what you are meant to do.”

Nicholas Beam, MD  
Pediatric Resident  
UW Health  
Western Michigan University  
Homer Stryker M.D. School of Medicine  
Class of 2018

Tomorrow’s Doctors, Tomorrow’s Cures®

Many applicants seem to realize their dream of becoming a doctor at an early age. A recent AAMC survey shows that half of all medical students who responded to the survey chose a medical career before they set foot in college — and one in five made the choice before they even started high school (refer to Figure 1.1).

Whether you have always known you wanted to be a doctor or are just starting to consider the idea, being a physician is an extremely rewarding profession. A career in medicine offers numerous opportunities to make a real difference in the lives of countless people.

As a doctor, you are likely to see new life come into the world or provide comfort to those about to leave it. Or you may choose to help build the future of medicine by educating the next generation of physicians. Perhaps you will dedicate yourself to discovering new cures for devastating diseases.

Whichever direction you follow, you will play a role in reducing or eliminating people’s pain and suffering, improving their quality of life, and providing invaluable service to your local community and maybe the country as a whole.
Figure 1.1. When did you decide to study medicine? Most applicants knew early on they wanted to be a doctor.

Your Medical Career Driven by Your Interests

Another benefit of the field is that you can choose from many and varied ways to practice. From clinical practice to biomedical research, from public health to medical education — the choices are plentiful (refer to Figure 1.2). Medical students typically have clear preferences for the areas they plan to specialize in after graduation. Many students change or refine their specialty preferences as they gain experience and knowledge in medical school. If your interests change with time and experience, medicine — because of its emphasis on lifelong learning and ties to research and technological developments — will provide you with opportunities to hone your skills and reorient your practice. Here are some examples of possible careers:

- The satisfaction of long-term patient relationships is one attraction of family medicine and internal medicine, where the bulk of time is spent in direct contact with patients. Physicians who work under the umbrella of “primary care” often care for entire families and enjoy the challenges that come from treating a diverse population with varied backgrounds and conditions.

- Other physicians, like cardiologists, ophthalmologists, dermatologists, endocrinologists, and other specialists, develop and apply detailed knowledge about the intricacies of a single organ or system.

- Physicians interested in scientific exploration with the desire to break new ground in medical knowledge can be found in the nation’s private and public laboratories and research institutions.

- Those with a commitment to social justice and an interest in fulfilling the health care needs of the underserved and disadvantaged can meet those challenges in urban and rural clinics, in public health, or as medical missionaries.

- Careers in general surgery often suit people who have a desire to see immediate results of their interventions. Plastic and reconstructive surgery draws others with artistic skills and aesthetic interests.

- Those interested in mind-body interactions and the emotional lives of their patients might find a home in neurology or psychiatry.

- The fast pace of medicine draws some to work as emergency physicians or trauma surgeons.
• Others motivated by national defense may use their skills as flight surgeons or in military medicine.

• The economic and public policy aspects of health care guide some physicians to think tanks and health-related organizations, as well as to serve in the legislative and executive branches of government.

• Those fascinated by issues facing groups of patients with age-defined illnesses and problems — from the risks in infancy and early childhood to the challenges of older life — find fulfillment as pediatricians and geriatricians.

• Assisting patients in overcoming complex fertility and gestational problems is the hallmark of specialists in reproductive endocrinology as well as obstetrics and gynecology.

• Those dedicated to reducing the incidence of birth defects and inherited diseases might find their calling in medical genetics.

• The detection, prevention, and eradication of injury and disease draw people to the fields of preventive medicine and epidemiology.

Once you enter medical school, you’ll start actively learning about these and the myriad other career options and considering where you best fit. This is addressed further in Chapter 3, in the section “Determining How You Want to Practice Medicine.”

**What About the Future?**

As long as we’re looking ahead, let’s look way ahead. In 5, 10, 15 years, what will medicine look like?

One thing is certain — the face of medicine changes continually. A good example of this is the growing prevalence of women in medicine. In the 1976-1977 academic year, women made up just 24.7% of all medical school matriculants. Compare that with 2019-2020, when they made up half — 52.4% — of the entering class, according to the AAMC Applicant Matriculant File.

Look back one generation, and you can see many new fields have emerged.
• In the early 1980s, a new — and fatal — illness was taking hold that nobody could identify. We now know it well: AIDS. **Infectious disease** is currently a large medical subspecialty, and, as a result, significant advances have been made in extending the lives of those infected with HIV.

• In last few decades, **minimally invasive surgery**, in which surgeons carry out precise procedures — sometimes with the assistance of a robot — became increasingly popular. Such surgeries are currently used in procedures on lungs, the esophagus, the prostate, the uterus, and kidneys. Through surgeries like these, patients benefit from smaller incisions, lower risks of complications, shorter hospital stays, less pain, and speedier recoveries.

• In **personalized medicine**, a career path unavailable to the previous generation, technology allows physicians to identify mutated genes and alert patients about their predisposition to a specific disease. (The next step — actually treating diseases with genes — is on the horizon.)

• Some more established fields have evolved to take on new applications. Radiology, for example, is no longer about just reading X-rays. Radiologists can now perform surgery as part of **interventional radiology**.

Even more exciting is what lies ahead: gene therapy, portable medical records, distance surgery, and focused medication. The possibilities for advancement in medical research are limitless.

• Early tests of **gene therapy** have been especially promising for cystic fibrosis, by transporting the correct CFTR gene via a harmless virus or liposome.

• Similarly, research is underway in **pharmacogenomics**, a field that uses patients’ genetic codes to develop tailored treatments. For example, if a patient’s genes fit a certain type of cancer code, the physician will prescribe the “matching” pharmaceutical developed to destroy cells with that code and will know — rather than hope — the treatment is likely to work. Pharmacogenomics is still in its infancy, with most forms of tailored drugs used in oncology, but studies are progressing in other areas, including cardiology, diabetes, and psychiatric disorders.

• Also in development is **focused preventive care**, which uses genetic diagnosis to identify to a very specific degree how likely a patient is to develop a certain disease or condition — and prevents that development before it has a chance to begin.

• Other advances may be administrative in nature; for example, the days of hunting down medical records are ending. One possibility being explored is a **portable medical records** system, or a national online database of individual health records. Everyone would carry a smart card (or have an implanted microchip!) allowing physicians easy access to medical records. This technology would reduce errors, make files readily available, minimize or eliminate delays, and eliminate the experience of having repeated — that is, unnecessary — tests.
Workforce Issues

Above all, know this: Whatever specialty you choose, your services as a physician will be needed.

According to a study commissioned by the AAMC, there will be a shortage of 54,100 to 139,000 physicians by 2033. The shortage is being driven in large part by the rapid expansion of the number of Americans age 65 or over. Our doctors are getting older, too. Nearly one-third of today’s physicians will be of retirement age in the next decade, just as more Americans need care. A continued demand for physicians and other medical professionals is projected.

Figure 1.3 illustrates the growing physician shortages between 2018 and 2033.

However, the shortages will be experienced unevenly, and some geographic areas will feel the effect more strongly than others. With that in mind, you might consider these trends as you think about the direction you’d like your career to take.

PRIMARY CARE

Although the nation is facing an overall shortage of physicians, many people are particularly concerned about the growing deficit of primary care doctors. Within the overall shortage of physicians, experts expect a shortfall of between 21,400 and 55,200 primary care physicians by 2033. To encourage U.S. medical school graduates to pursue a career in primary care, the federal government and many state governments offer a variety of scholarship and loan repayment programs. You may want to explore the rewards this type of career offers, including the satisfaction that comes from delivering comprehensive care and long-term relationships with your patients.

UNDERSERVED AREAS

The impact of this shortage is expected to be greatest in underserved areas — the urban and rural areas where health care is already scarce. If you choose to serve in a community designated as a Health Professional Shortage Area by the U.S. Department of Health and Human Services, you may be able to take advantage of a federal program — the National Health Service Corps — that offers scholarships and loan repayment. According to the AAMC’s 2019 Matriculating Student Questionnaire, about 36.1% of entering students planned to work in a primarily underserved area, and more than half of entering-student survey participants hadn’t yet decided where they wanted to work. (Learn more about this program in Chapter 10, “You Can Afford Medical School.”)
A More Collaborative Approach

As Congress explores various scenarios for health care reform, one thing is nearly certain: Given the projected shortage of physicians, we will need to develop new models of health care delivery that make better, more efficient use of all health care professionals — not just doctors.

That means you can expect to work within a more collaborative, shared environment, in which a team of health care providers — including physician’s assistants and nurse practitioners, for example — work in tandem. Exactly how that will play out is still in development, but the goal is to create a more efficient system, increase patient satisfaction, and, ultimately, improve health outcomes.

A collaborative approach to health care delivery is instilled beginning in the early years of medical education. Read more about the use of small-group discussions, problem-based learning, and other educational models in Chapter 3, “Your Medical School Years: The Education Process.”

Immediate Steps That Lie Ahead

That’s the future — or at least what we expect. Right now, though, you’re undoubtedly more focused on the short-term goal of getting into medical school.

So what is the process for applying to medical school? What lies ahead?

Let’s be candid. Getting into medical school isn’t easy. (But it’s definitely doable — as the more than 92,758 students currently enrolled can testify!) You will need to prepare for and take the MCAT exam, select schools to apply to, complete the application, write a personal statement, gather letters of evaluation, secure your undergraduate transcripts, and interview. Then you will wait for notices of acceptance and make your final decision. If you’re not accepted, you’ll need to evaluate your options and figure out what to do next. All of this will be covered in the following chapters.

But first, you can take many steps to make yourself a more attractive candidate to admissions committees. From taking the necessary courses to working effectively with your prehealth advisor to participating in extracurricular and volunteer activities, there’s a lot you can do now.

The next chapter focuses on your undergraduate preparation.

A Note for Career Changers or Gap-Year Applicants

If a year or more has passed since you graduated from college, you’re not alone. Well over half (62.5%) of matriculating medical students indicated in the AAMC’s MSQ that there was a gap between their college graduation and matriculation to medical school of at least a year. Medical schools do not see a break between the end of college and beginning of medical school as a weakness or negative attribute. In fact, what you’ve experienced or accomplished during this time may enhance your application and qualifications significantly.

We’ll provide tips and things to consider throughout this book to help guide you through the application and preparation process. We know there may be some variation in how you’ll need to prepare yourself and compile the different components of your application now that you’re no longer on campus.

Worksheets at the ends of chapters in this guide are available in fillable PDF format at aamc.org/msar-resources.
WORKSHEET 1.1
Important Resources and Ideas for Getting Medically Related Experiences

Advising Office
Your prehealth advisor*:
Advising office phone number:
Advisor’s email address:
Office location:

*If your school does not have prehealth advising or you don’t have access to an advisor, refer to the National Association of Advisors for the Health Professions’ (NAAHP’s) Find an Advisor service (naahp.org/student-resources/find-an-advisor).

Clubs and Volunteer Opportunities
Premed club or society on campus:
Premed honor society:
Service organization club or fraternity:

Other Ideas to Make Contacts and Get Experience:
- Contact science department about lab and/or research opportunities.
  Notes:

- Contact local clinic or health service provider for volunteer, paid, part-time, or internship opportunities.
  Notes:

- Contact health care providers you know about shadowing opportunities.
  Notes:
MSAR Website — Complete U.S. Medical School Profiles

For complete, detailed information about each U.S. medical school, including MCAT and GPA data, school-specific admission requirements and policies, applicant and acceptee statistics, and side-by-side medical school comparisons, purchase an MSAR subscription. For more information about the MSAR website, a preview of the site, and a complete list of site features, data, and information, visit aamc.org/msar.

U.S. Medical Schools

This comprehensive guide to medical school admissions helps you:

- Identify prospective medical schools.
- Navigate the application process.
- Understand admissions decisions.
- Organize and plan with premed worksheets.

The guide is published by the AAMC, an organization that represents U.S. and Canadian medical schools, administers the MCAT® exam, and manages the American Medical College Application Service® (AMCAS®). Visit aamc.org for more information.

Research medical schools

The AAMC also publishes comprehensive online profiles of each U.S. and Canadian medical school, featuring information directly from the MCAT exam and the AMCAS application and through a partnership with medical school admissions offices. When it's time to search for medical schools, subscribe to the AAMC’s Medical School Admission Requirements™ (MSAR®) site.
