Notes.

These tables include test results for all examinees—not just those who have applied (or are planning to apply) to medical school. They also include multiple test results for examinees who took the MCAT exam more than once during the testing year, but exclude test results for administrations in which examinees opted to void their test scores.

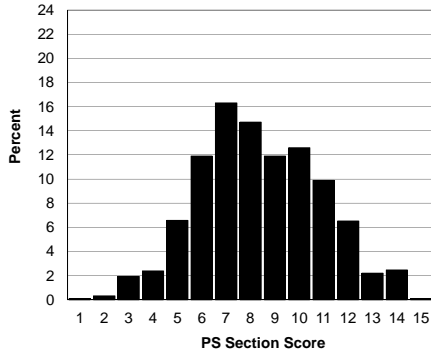

The columns labeled "Percent Achieving Score" provide, for tests administered in 2012, the percentage of test results that were equal to each possible score point.

The columns labeled "Percentile Rank" provide, for tests administered in 2012, the percentage of test results that were equal to or less than each score point.¹

For example, a total of 5.4 percent of total test scores were equal to 30 in the 2012 testing year, and 78.7 percent of test scores were equal to less than this value.

¹Prior versions of these tables (pre-2012), as well as current score reporting systems maintained by the AAMC, such as THx, SRS, and AMCAS, report the "Percentile Rank Range" in these columns rather than a single percentile rank. The percentile rank columns in the current tables correspond to the upper bound of the percentile rank ranges provided in these other versions. The lower bounds in these other versions essentially serve to provide continuity across score points.
